

Shadow-Soft Cloud Solutions

Key Benefits

- Shorten application development cycles and deliver better quality software
- Focus on writing code and let cloud providers build, run, and scale your apps in the cloud
- Automate and scale infrastructure

Overview

Shadow-Soft's cloud solutions help to reduce the risk and uncertainty when designing, reviewing, and implementing a cloud architecture and strategy. Our experienced and certified cloud consultants can arm your organization with the processes and tools necessary to take advantage of the cloud while avoiding common pitfalls.

Our team will help to design your cloud architecture, assist with the setup, migration, and governance of your cloud environment, work with your team to implement core technologies, and enable your team with training, best practices, and knowledge transfer.

Consume our services via a workshop, assessment, or quickstart engagement.

Cloud Workshop

- 3-5 day on-site or remote
- Tailored content designed to teach your team best practice cloud architecture
- Walk away with a better foundational understanding around how cloud can affect your business, what changes you have to consider in order to make the transition, and more about cloud technologies
- Equip your team with the skills to begin a designing a cloud strategy right away

Cloud Assessment

- 2-3 week assessment reviews your existing applications, software developer lifecycle, and automation and security practices
- Assess application architecture and integration within existing tool chain
- Provide process improvement recommendations and architectural guidance
- Deliver assessment report detailing current environment, gap analysis of capabilities, recommendations for improvement, and provide an estimate for implementation time and tooling

Cloud Quickstart

- 6+ week engagement to help you design a cloud architecture and governance strategy
- Onboarding, training, and knowledge sharing around cloud fundamentals
- Review applications and develop an application migration strategy
- Assist with architecting a cloud environment
- Migrate an application to the cloud
