Red Hat OpenShift on AWS: Implementation

$25,000 / 4-Weeks

Get up and running with a Red Hat OpenShift cluster and integrate it directly with AWS Services.

As an AWS Advanced Consulting Partner and a Red Hat Apex Partner, Shadow-Soft's certified engineers can architect, implement, and integrate a Red Hat OpenShift solution on AWS. Rapidly provision and configure a Red Hat OpenShift cluster and integrate it directly with AWS Services, allowing your organization to automate container management and enable developer speed.

What's Included:

- Rapidly provision and configure a OpenShift cluster with cluster sizing, capacity/network planning, storage, cluster monitoring, and third-party integrations

- Configure platform operations, including cluster security and governance, backup, performance, logging, metrics, and capacity

- Architect and integrate CI/CD pipelines, repository management, and code deployment and management

- Assess and recommend AWS architecture to support Red Hat OpenShift

- Integrate with over 18 AWS Services, including Amazon RDS, Amazon EMR, Amazon DynamoDB, Amazon S3, and Amazon SQS, Amazon Athena, Amazon ElasticSearch Service, Route 53, and more

- Codevelop security practices with Amazon IAM

Key Benefits:

- AWS and Red Hat Certified Engineers

- PoC funding programs available

- Enablement and knowledge transfer via "over the shoulder" training
